Andres Eduardo Cordova Orellana

SOFTWARE ENGINEER | FULL STACK DEVELOPER

https://www.linkedin.com/in/ing-cordova/

PROFILE SUMMARY

Systems engineer and full-stack developer with over three and a half years of experience in the design and implementation of scalable software solutions. Expert in backend (Java, Node.js, Python, Django, PHP), frontend (Vue3, React, TypeScript), and databases (PostgreSQL, MySQL, MongoDB). Proficient in Docker, Git, CI/CD, and Linux. Strong background in software architecture, microservices, and deployment. Bilingual: English and Spanish. I am looking for challenging opportunities to contribute to innovative and impactful projects.

SKILLS

PROFESSIONAL SKILLS Critical Thinking | Team Leadership Excellent Communication| | Public Speaking | Decision Making | Project Management | Adaptability & Flexibility | Collaboration & Teamwork | Continuous | Learning & Self-development | Strategic Planning | Process Improvement

TECHNICAL SKILLS JavaScript |Java | Spring Framework | Nest Js | Typescript | Javascript | Python| DJango |Laravel | HTML5 & CSS3 | GIT & Version Control | SQL | Mongo DB | SQL Server | Postgres SQL | RESTful API Integration | Linux/Unix | Vue 3 | React Js | Docker | Azure DevOps | AI Tools as Claude Code, Gemini, Codex, Github Copilot, Prompt Engineering, Google Cloud Services.

WORK EXPERIENCE

Software Developer Secretaría de Innovación de la Presidencia| San Salvador, San Salvador| 05-2024 - Currently

- Full-stack development of government solutions, integrating AI to accelerate project delivery.
- Implementation of chatbots, conversational assistants, and AI-powered automated workflows to optimize public processes and services.
- Collaboration with multidisciplinary teams on technology projects with national impact.

Software Developer Techy We| Remote | 07-2023 / 04 - 2024

- I participated in projects for international companies in the banking sector, implementing scalable and more secure architectures on the backend, as well as effective communication between colleagues from different countries, to deliver a quality product.
- Implement new features in the API flow
- Develop and testing API
- Work along the developer team to build awesome
- Creation and Integration of microservices for API

Application Development Trainee Telus International Digital Solutions| Remote | 01-2023 / 04-2023

- As a software development intern, collaborating with large teams, I learned backend, frontend, and devops technologies, preparing us for internal company projects and professional skill development, as well as good communication with product owners.
- Software Developer as Backend and Frontend.
- Java, React, Spring Framework.
- English Communication
- Agile Methodology

ACHIEVEMENTS & VOLUNTEER EXPERIENCE

Cum Laude Honor — GPA 9.3 / 10 11-2024
University Dr. Andres Bello, Chalatenango, Chalatenango

PROJECTS

Family Friendly — Nationwide Platform with Conversational AI **2026**
I contributed to the development and launch of a public-access platform for discovering family-friendly activities and venues throughout El Salvador. I implemented an AI assistant with retrieval-augmented generation (RAG), semantic search, and conversational memory, transforming the catalog into a natural-language query experience. I integrated real-time responses, security controls, and monitoring of AI usage and costs for its production operation.
Role: Full-Stack Developer
Link: [Link to website]

Orion — Personal Finance with Secure AI Assistant Integration **2026**
I developed Orion as a personal project: a self-hosted platform designed for people looking to organize their finances, with user-specific information. I took a cross-functional approach to financial management using a ledger with decimal precision and idempotent operations, which distinguish between expenses, debt, and available funds without duplicating transactions. I incorporated data import and reconciliation, the ability to read bank notifications from Gmail, and reminders to make it easier to track financial obligations. I integrated an MCP server that allows AI assistants to query financial information and record transactions through client-specific permissions, previews, explicit confirmation, and auditing, while keeping control in the user's hands.
Role: Full-Stack Developer · Personal Project
